

# saltrad TE

Cutting edge solution to manage salinity and sodicity problems

## DESCRIPTION

- Unique specialty corrector for saline and sodic soils
- Exclusive formulation with Calcium, Sulfur and Organic Acids
- Multiple modes of action to allow for integrated management of soils
- Allows for remediation of soils that already have salinity and sodicity problems
- Allows for preventative management of soils at risk of salinity
- Apply early in the season before the crop is stressed and repeat applications as needed
- Apply by drip, overhead sprinkler and pivot irrigation
- Suitable for use on all soil types
- Manufactured in Europe under management system certified to ISO 9001 & ISO 14001
- Guaranteed contents
- 20 L, 210 L, 1000 L sizes (other sizes available if forecasted)

## TECHNICAL SPECIFICATIONS

- |                        |           |
|------------------------|-----------|
| - Organic Acids:       | 19.5% w/v |
| - Sulfur (S):          | 11% w/v   |
| - Calcium (Ca):        | 7% w/v    |
| - Manganese (Mn) EDTA: | 0.13% w/v |
| - Zinc (Zn) EDTA:      | 0.06% w/v |

# saltrad TE

## MAIN BENEFITS

- Highly efficient corrector of saline and sodic soils
- Organic Acids help lift the Sodium from the soil surface and bring it into solution
- Calcium takes the place of Sodium on the soil surface preventing Sodium reattachment
- Calcium is also available for plant uptake helping balance growth against excess Sodium
- Sulfur acidifies the soil slightly, helping to keep the Sodium in solution
- Sulfur becomes  $SO_4$  and attaches to the Sodium to become  $NaSO_4$  and is ready for leaching
- Zinc promotes root division and Manganese promotes elongation
- Also consider including Lower 7 TE in the soil management program to maximise success in managing affected soils

## SOIL APPLICATION (DRIP IRRIGATION)

<b>All Crops</b>	10-15 L /ha	Apply according to the EC of the soil. Repeat 3-5 times throughout the crop cycle
<b>As saline water corrector</b>	75-125 g /m <sup>3</sup>	

The use of the following dosages according to the electrical conductivity (EC) is recommended:

EC (dS /m)	Dosage
> 4	70 L /ha
Between 3 and 4	55 L /ha
Between 2 and 3	40 L /ha

## DOSAGE AND METHOD OF USE
